

## E-Cigarettes

On April 25, 2011, the U.S. Food and Drug Administration (FDA) [announced](#) that e-cigarettes will be regulated as tobacco products unless the products are marketed as therapeutic, making a claim that e-cigarettes can help someone quit smoking for example. While FDA made the initial announcement that it intends to regulate most e-cigarettes as tobacco products, much more research is needed about the potential health effects of e-cigarettes. The American Lung Association urges the Obama Administration and FDA to move forward without delay to begin overseeing these products to determine the public health impacts of their use.

### What is an E-Cigarette?

- According to the FDA, electronic cigarettes, or e-cigarettes, are devices that allow users to inhale a vapor containing nicotine or other substances.<sup>1</sup>
- Unlike traditional cigarettes, e-cigarettes are generally battery-operated and use an atomizer to heat a refillable cartridge that then releases a chemical-filled vapor.
- E-cigarettes are often available in flavors that may appeal to children and teens, including cotton candy, chocolate, strawberry and mint.<sup>2</sup>

### What are the Health Effects of E-Cigarettes?

- The health consequences of the use of e-cigarettes and the vapor that they give off are unknown. There is currently no scientific evidence establishing the safety of e-cigarettes. No brand of e-cigarettes has been submitted to the FDA for evaluation of their safety.<sup>3</sup>
- In initial lab tests conducted in 2009, FDA found detectable levels of toxic cancer-causing chemicals, including an ingredient used in anti-freeze, in two leading brands of e-cigarettes and 18 various cartridges.<sup>4</sup> The lab tests also found that cartridges labeled as nicotine-free had traceable levels of nicotine.
- There is no evidence that shows the vapors emitted by e-cigarettes are safe for non-users to inhale. The use of e-cigarettes in public places and workplaces may also complicate efforts to enforce and comply with smokefree laws. Because e-cigarettes have not been thoroughly evaluated, the American Lung Association supports prohibiting the use of e-cigarettes under smokefree laws.
- Further research is needed to understand whether e-cigarettes are marketed at kids, whether current smokers are switching to these products instead of quitting or are using them in conjunction with regular cigarettes.

### Can E-Cigarettes Help Someone Quit Smoking?

- The FDA has not approved e-cigarettes as an effective method to help smokers quit. The U.S. Public Health Service has found that the seven therapies approved by the U.S. Food and Drug Administration in combination with individual, group or phone cessation counseling is the most effective way to help smokers quit. Until and unless the FDA approves a specific e-cigarette for use as a tobacco cessation aid, the American Lung Association does not support any direct or implied claims that e-cigarettes help smokers quit.
